

The military in the USA has expressed an interest in utilizing the Green Diesel fuel system

• **Green Diesel Corp is** an Australia-based environmentally conscious company committed to making a difference. The company's main aim is cleaner air for everyone and to exceed the 2010 EPA Standard.

Green Diesel Corp has developed an ultra high-pressure fuel injection system suitable for diesel and petrol engines. The Green Diesel fuel system dramatically reduces particulate emissions while delivering benefits of more torque, more power and less fuel consumption.

Green Diesel Corp has won many awards internationally and nationally and is interested in attracting suitable applicants and companies in assisting the commercialization of the system in Europe.

Green Diesel Corp is a public company with resources extending to full combustion and injection equipment research facilities. The USA military has expressed interest in utilizing the Green Diesel fuel system to improve the performance of the GM Duramax motor. Green Diesel Corp has successfully converted a number of petrol motors to diesel operation. The GM V6 Alloytec petrol motor is in the process of being altered to diesel operation, as can be seen on display at Engine Expo, which takes place on 6, 7 and 8 May 2008 in Stuttgart, Germany. Inbuilt transducer controlled, Green Diesel Corp's fuel system delivers ultra high-pressure injection. A unitized system, each injector has its own inbuilt pump. The Green Diesel fuel injection system has altered the combustion process by reducing the temperature of combustion and injecting at pressures of up to 160,000psi.
